- Hilarius Juan / 682021070
- Amatya Keiko / 682021008

The screenshot displays the NetBeans IDE environment. The main window shows the source code of a Java application. The code is organized into three event listener methods:

- `jButton1ActionPerformed`: Handles the click of the first button, displaying a dialog box with the USD rate (250).
- `jButton2ActionPerformed`: Handles the click of the second button, displaying a dialog box with the IDR rate (3250000).
- `jButton3ActionPerformed`: Handles the click of the third button, displaying a dialog box with the JPY rate (28750).

The dialog box, titled "KURS MATA UANG", is a modal window with a light gray background. It features a title bar with standard window controls. The dialog contains four text input fields labeled "USD", "IDR", "JPY", and "EUR". Below these fields is a "Konversi" button. At the bottom of the dialog are two buttons: "Hapus" (Close) and "EXIT".

The IDE interface includes a menu bar at the top with options like File, Edit, View, Navigate, Source, Refactor, Run, Debug, Profile, Team, Tools, Window, and Help. A toolbar is located below the menu bar. On the left side, there is a project explorer showing the project structure, including source packages and libraries. The status bar at the bottom indicates the application is running and shows the system clock as Thursday, February 9, 2023, at 3:21 PM.

Dalam program kurs mata uang ini terdapat label, text field, dan button. Aplikasi tersebut digunakan untuk menghitung kurs mata uang USD, IDR, JPY, dan EUR. Dalam button konversi terdapat codingan untuk menghitung konversi mata uang nya. Dalam button hapus, berate dia akan mengkosongkan textfield yang ada, dan button exit artinya akan menutup programnya.
